

REALLOC

AI Capability Program for Sagicor Financial Company

Diagnose. Reallocate. Equip.

Prepared by THCO | Powered by the Realloc Platform | March 2026

Supported by 269 vetted AI practitioners from Meta, McKinsey, NVIDIA, OpenAI, Morgan Stanley, xAI, IBM, SAP, AWS, and 50+ other leading organizations.

"The question is no longer whether AI will change your workforce. The question is whether you will lead that change or react to it."

THE CHALLENGE

AI Is Restructuring Work. Right Now. Inside Sagicor.

AI is not eliminating jobs overnight. It is changing what makes each role valuable.

Some of Sagicor's 498 technology employees are about to become more valuable than ever. Others are in roles that AI is actively commoditizing.

Until now, there has been no way to tell which is which.

How Companies Typically Respond

Generic Training

Same AI course for everyone

Wastes budget on the wrong people

Consulting Firms

3-6 months of discovery first

Slow, expensive, starts without data

Vendor Certifications

One vendor's tools for everyone

Narrow, no personalization

Doing Nothing

Wait and see

Competitors recruit your best people

All four approaches start without data.

What If You Already Had the Data?

What if every worker had already been assessed?

Their tasks decomposed.

Their displacement direction scored.

Their gaps identified.

Their manager's validation recorded.

Sagikor already has that data.

The Most Comprehensive Technology Workforce Assessment in Sagicor's History

● LIVE METRICS

498 Workers Assessed

6 Countries

242 Self-Assessments Completed

2,500+ Tasks Decomposed

10,000+ Data Points Collected

Jamaica, Canada, USA, Barbados, Trinidad and Tobago, Curacao.

Where We Are in the Assessment Process

PHASE 1	Self-Assessment	● Complete	242 responses. How workers perceive their own capabilities.
PHASE 2	Manager Validation	● Underway	How managers independently rate capability and classify builders.
PHASE 3	Technical Assessment	● Upcoming	Objective measurement through structured simulations.
PHASE 4	Hands On Simulation	● Upcoming	Applied AI problem-solving under realistic conditions.
All displacement scores, builder core rankings, and group distributions in this presentation are based on Self-Assessment inference and Manager Validation data received so far. They are directional, not definitive. As Technical Assessments complete, these will sharpen.			

Early Signals: Your Workforce Falls Into Three Groups

Based on SA inference and MV data to date.

~32%

RISING

AI automates the routine. Their core expertise becomes more valuable.

They need acceleration, not retraining.

~41%

STABLE

Displacement direction unclear. Could move either way.

They need monitoring and targeted upskilling.

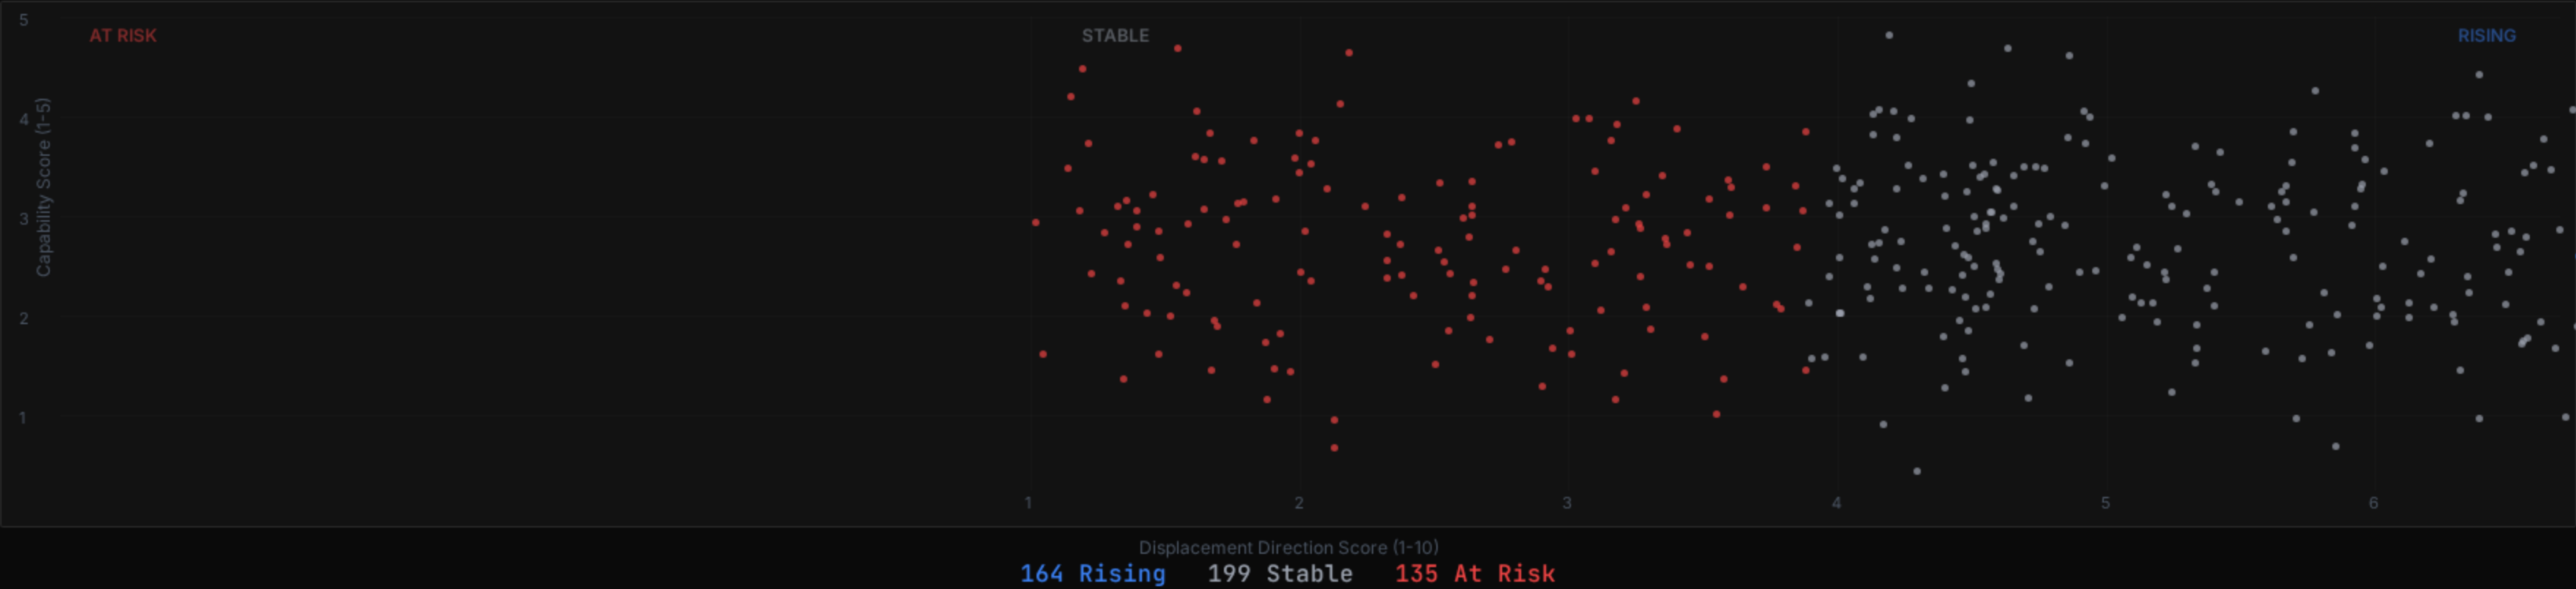

~27%

AT RISK

AI automates the expertise itself. Generic upskilling will not help.

They need structural reallocation.

Workforce Heatmap: 498 Workers Visualized

Based on SA inference and MV data. Click any dot in the live platform to see that person's full diagnostic.

From Assessment to Action

1	Assessment Data Collected	498 workers. SA + MV. Technical Assessment upcoming.
2	Displacement Direction Scoring	Each worker scored 1-10.
3	Builder Core Identification	Top candidates ranked by three criteria.
4	Cohort Design	Grouped by gaps, geography, multiplier potential.
5	Personalized Curriculum Generation	No two programs are the same.
6	Mentor Matching	Practitioners matched to diagnostic profiles.
7	Business Case Scoping	Capstones target real workflow inefficiencies.
8	Outcome Measurement	Actual impact against assessment baselines.
9	Model Improvement	Every cycle makes the next one smarter.

Why No Competitor Can Replicate This

The assessment was the precursor to everything in this proposal.

Every training path, every cohort selection, every mentor match, every business outcome projection is built from Sagicor's own workforce data.

Any vendor who wants to compete must first replicate the assessment. That means starting four months behind.

THCO is not asking Sagicor to start over. THCO is asking Sagicor to activate the data it already owns.

Identifying Who to Invest In First

Not everyone should go through intensive training at the same time. The first cohort should be the people with the highest return on investment.

We identified the builder core using three quantitative signals from the assessment data.

Current rankings based on Self-Assessment and Manager Validation data. Will be refined as Technical Assessment completes.

Three Criteria. All From the Data.

Manager Validation

We prioritized individuals whose direct managers independently rated them highest and classified them as Core Builders. Organizational confirmation of capability.

Self-Awareness

Workers who rate themselves lower than their managers rate them (humble performers) demonstrate stronger learning outcomes. They absorb feedback. They do not waste investment.

Strategic Role Relevance

We prioritized roles on the critical path of AI deployment: data analytics, infrastructure, application modernization, enterprise risk, systems architecture.

Composite Score = (SA Average x 0.30) + (MV Average x 0.50) + (Strategic Fit x 0.20)

BUILDER CORE

#1

Slight Under-rater

Eugene McDermott

BCM Specialist, IT Risk and Security, Canada

SA

MV

COMP

GAP

4.62

4.83

4.65

-0.21

Highest MV score in the entire pool. Manager describes him operating with very little guidance. Received quarterly Award of Excellence. Enterprise-wide BCM expertise.

#2

Well-calibrated

Helen (Hua) Xia

Manager, Corporate Systems, Canada

SA

MV

COMP

GAP

4.55

4.50

4.32

0.05

Most accurately self-aware candidate (gap 0.05). People manager, training cascades to direct reports. Led IFRS17 system solution. Manager endorses 'AI training.'

#3

Slight Under-rater

Carol Blackwood

Sr Business Systems Specialist, Data Analytics, Canada

SA

MV

COMP

GAP

3.97

4.33

4.06

-0.36

Manager rates her higher than she rates herself. Data analytics department, directly on the AI critical path. Requests 'a mentee or successor to develop.' Knowledge-sharing behavior.

BUILDER CORE

#4

Well-calibrated

Anna (YueHua) Chen

Technical Lead, Application Modernization, Canada

SA

MV

COMP

GAP

4.05

4.17

4.05

-0.12

Manager explicitly endorses for 'leading the new AI-driven development.'
Technical Lead for Application Modernization. Creates documentation and encourages developers to follow same practice.

#5

Slight Over-rater

Clarence Chai

Sr Systems Specialist, Data Analytics, Canada

SA

MV

COMP

GAP

4.37

4.00

3.93

0.37

Already actively building Azure and Fabric expertise. Creating solution architecture diagrams. Aspiration aligns perfectly: 'Cloud data platforms, Python, ETL modernization.' Self-directing toward AI.

#6

Significant Under-rater

Karen McCulloch

Sr Business Systems Specialist, Corporate Systems, Canada

SA

MV

COMP

GAP

3.01

4.43

3.92

-1.42

Largest positive gap in the pool. Classic hidden talent. Submitted 184 SA responses, the most detailed in the entire assessment. 20+ years of system conversion experience. Manager rates her 4.43 while she rates herself 3.01.

15

#7

Slight Under-rater

Ben Wong

Sr Enterprise Architect Lead, Data Analytics, Canada

SA

MV

COMP

GAP

3.60

4.00

3.88

-0.40

Sought-after across IT and business. Manager endorses 'Agentic AI software development.' Aspires to CTO. Career spans HBC, Manulife, Canada Life.

#8

Over-rater

Aftab Siddiqi

Sr Business Systems Specialist, JDE, Corporate Systems, Canada

SA

MV

COMP

GAP

4.41

3.83

3.84

0.58

Deep JDE, Oracle, SAP, SQL expertise. Designed IFRS dual reporting structure. Over-rating gap to be addressed through mentor coaching.

#9

Slight Over-rater

Allan (Xin Long) Yu

Sr Network Analyst, Infrastructure, Canada

SA

MV

COMP

GAP

4.07

3.83

3.79

0.24

Network architecture, firewall, VPN, AWS/Azure cloud integration. Documentation described as 'invaluable to the team.' AI deployment requires robust network infrastructure.

#10

Slight Over-rater

Ivan (Ho Wai) Tang

Inter Business Systems Analyst, Web Services, Canada

SA

MV

COMP

GAP

4.27

3.83

3.75

0.44

Already Scrum Master for Sense.AI team. Manager endorses 'advancing AI and eForm capabilities.' Built EasySend implementation end-to-end. Embedded in Sagicor's AI initiative.

Builder Core Composition

From 51 employees with both SA and MV data complete

Top 10: Canada (10)

Jamaica appears from rank 11: Charis Pringle, Shanakaye Ferguson, Carllel Colquhoun, Damion Case, Tatianna Thomas-Hill, Shona Richards

Barbados, USA: No candidates with both SA + MV complete yet

What Changes as More Data Arrives

More MV from Caribbean	Caribbean candidates enter top 20
Technical Assessment	Objective capability, may reorder rankings
Hands On Simulation	Applied problem-solving, may surface hidden talent

Full top 20 list with diagnostic profiles provided as separate deliverable.

Training 20 People. Impacting 60+.

Charis Pringle

Manager, Technical Systems, Jamaica

6+ developers

Anna Chen

Technical Lead, Modernization, Canada

Modernization team

Helen Xia

Manager, Corporate Systems, Canada

Direct reports

Conservative estimate: Training 20 people directly impacts 40-60 through knowledge transfer.

This Is Also a Retention Strategy

Top technology talent is being actively recruited by consulting firms and competitors.

At least one Sagicor team member has already been recruited away.

A personalized development program with access to practitioners from Meta, McKinsey, OpenAI, and leading banks sends a clear signal:

**"We see you. We are investing in you.
Your future is here."**

How THCO + Realloc Compares

	CONSULTING FIRM	TECHNOLOGY VENDOR	THCO + REALLOC
Discovery	3-6 months	None (generic)	Already complete
Assessment data	Survey/interviews	None	498 workers, task-level
Personalization	Cohort-level	None	Individual-level
Curriculum basis	Consultant opinion	Vendor products	Sagikor's own data
Who teaches	Junior consultants	Certified trainers	THCO AI professionals + 269 practitioners
Platform	PDF reports	Vendor LMS	Live enterprise dashboard
Self-sufficiency	Vendor dependency	Vendor lock-in	12-month path to independence
Time to launch	6-9 months	2-3 months	April 2026

Three Layers. One System. All Connected by Data.

THCO AI PROFESSIONALS

Design curriculum. Facilitate boot camp. Deliver practitioner briefings. Lead group sessions. The team that has been working with Sagicor's data for four months.

REALLOC PLATFORM

Analyze assessment data. Generate personalized curricula. Recommend capstone topics. Track progress. Produce board reports. The intelligence engine.

EXPERT MENTOR COMMUNITY

269 practitioners from Meta, McKinsey, OpenAI, NVIDIA, Morgan Stanley. Review every submission. Available for 1-on-1 sessions. Enforce production-quality standards.

THCO teaches. Realloc prescribes. The Expert Community mentors.

How the Three Layers Work Together

THCO AI Professionals Teach	<i>"Here is how AI architecture patterns work in enterprise financial services."</i>
Realloc Platform Prescribe	<i>"Based on your assessment, your primary gap is AI deployment. Your program weights Production AI at 25%."</i>
Expert Mentor Community Quality Control	<i>"Your architecture needs a circuit breaker pattern. At Meta we learned this the hard way."</i>

No other provider has all three layers. A consulting firm has people but no diagnostic platform. A technology vendor has a platform but no practitioner community. A training company has content but no assessment data.

"The person reviewing your team's work is not a junior consultant. They are a practitioner who has built exactly what Sagicor needs to build."

269

Vetted AI Practitioners

Leading Tech	Meta, NVIDIA, OpenAI, xAI, IBM, SAP, AWS, McKinsey, Snorkel AI
Financial Services	Morgan Stanley, Bank of America, American Express, Northern Trust, CPP Investments
Doctoral Researchers	23 (ML, NLP, AI safety, computational science)
Senior/Lead/Architect	70+
Based in Canada	108
Based in USA	93

These are not career trainers. They are active practitioners who build, deploy, and maintain AI systems in production.

Assessment Data Drives Mentor Assignment

Gap: AI integration for legacy modernization	>	Built AI workflow tools at Meta for 3,000+ engineers
Gap: Infrastructure readiness for AI	>	Deployed production AI on Azure for tier-1 Canadian bank
Gap: AI agent design and prompt engineering	>	Developed LLM applications at OpenAI

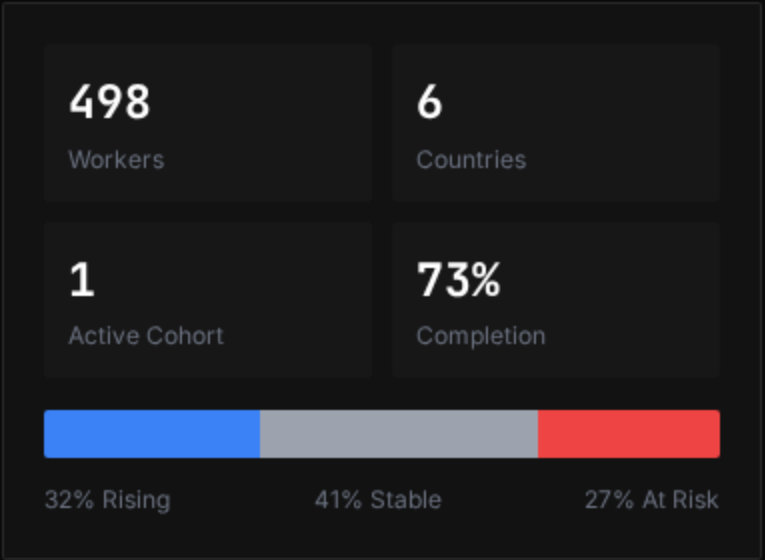

This matching is impossible without the assessment data.

One Platform. Three Views. Connected by Data.

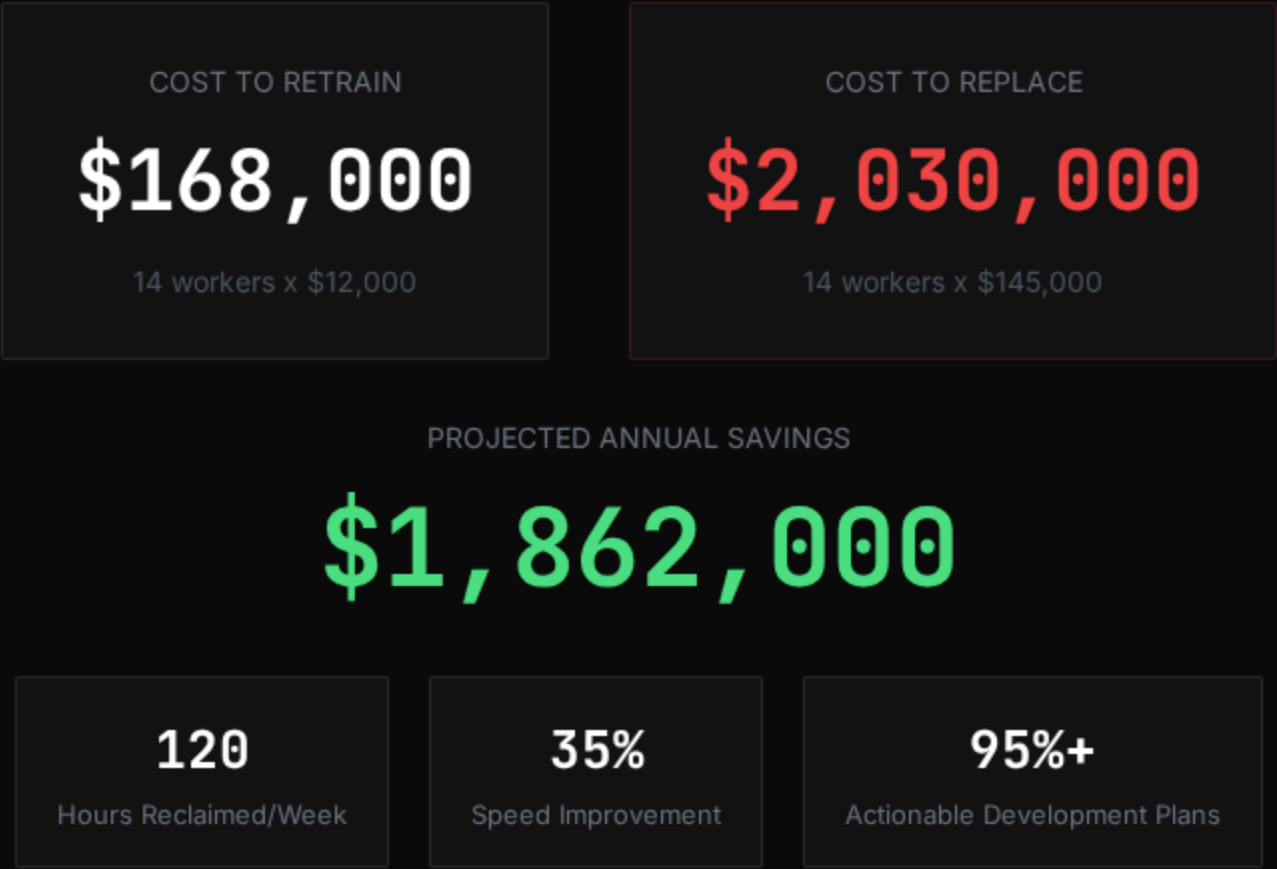

This is not a PDF report. It is live enterprise infrastructure.

What Sagicor Leadership Sees

- Workforce Heatmap: 498 workers visualized by displacement direction
- Builder Core Rankings: top candidates with data visible
- ROI Projection: cost to retrain vs. replace
- Risk Reduction Trend: at-risk declining, rising increasing
- Board Report Generator: one click, downloadable PDF

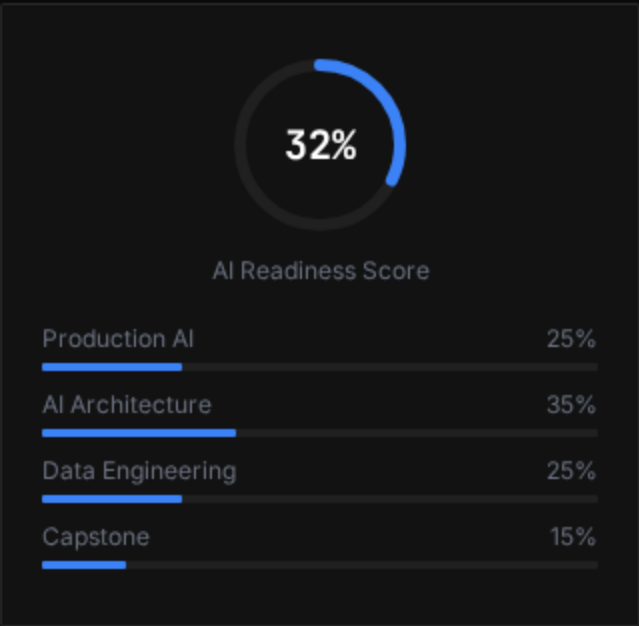

The Business Case

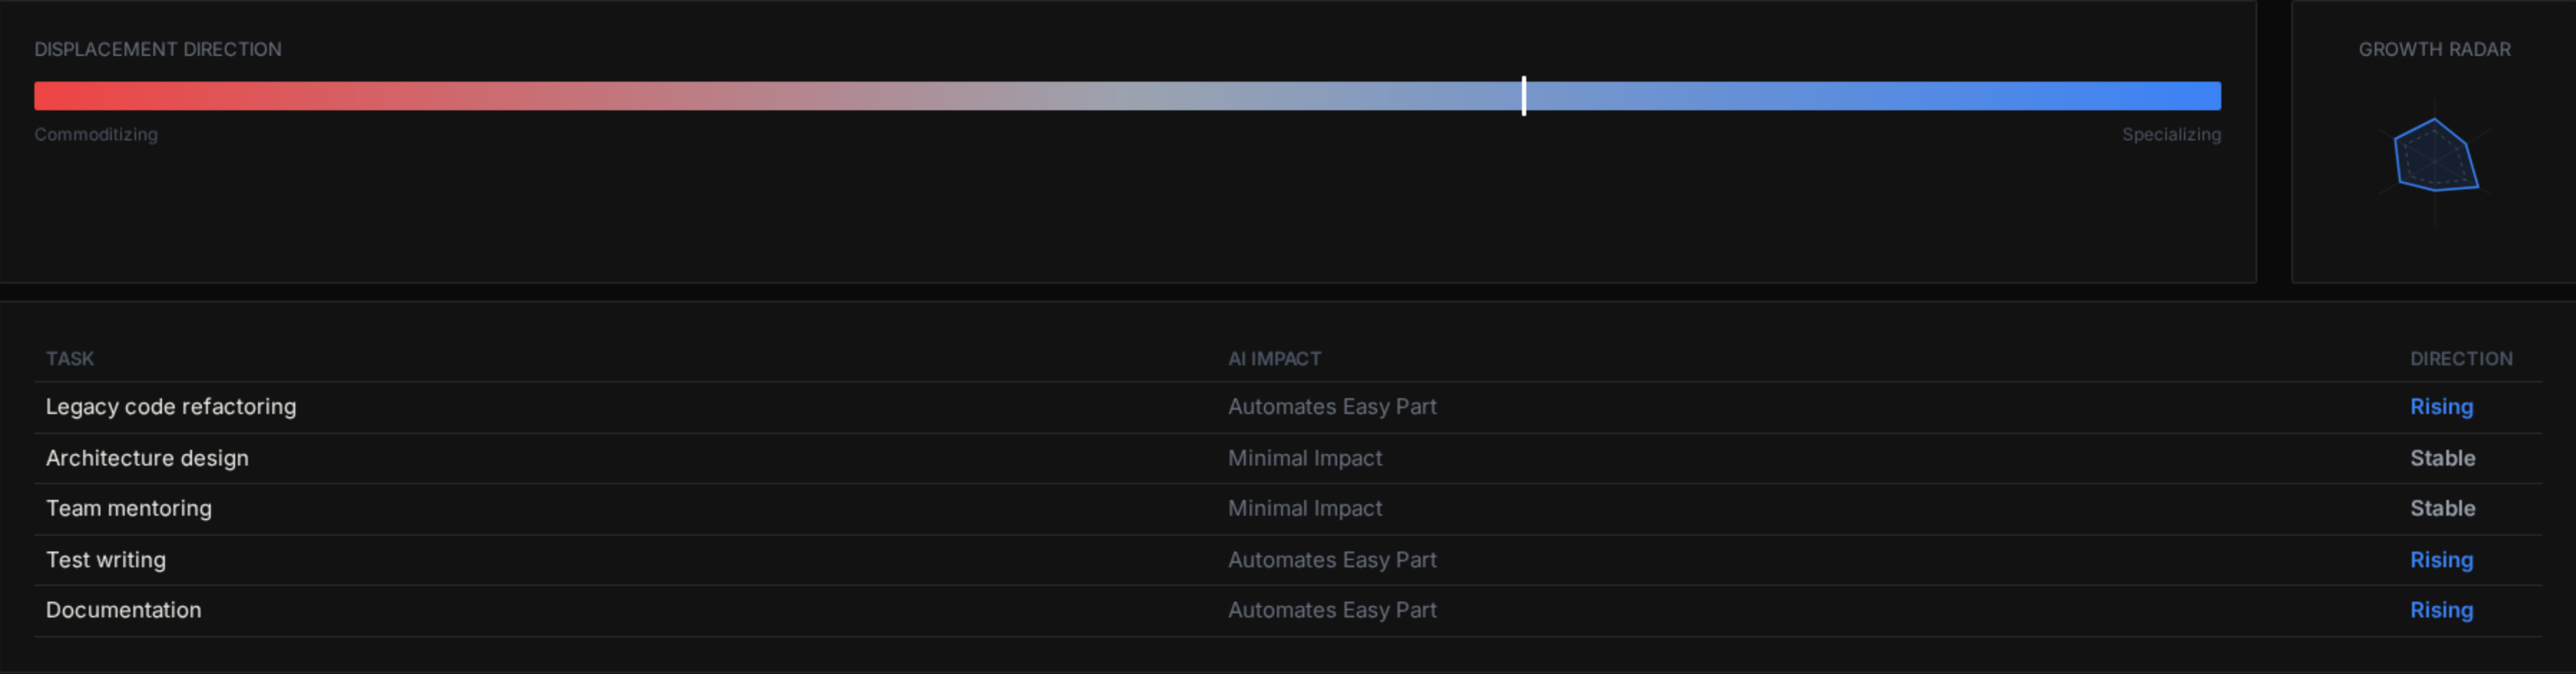

What Your People See

- Personal Diagnostic: displacement score, task decomposition
- AI Readiness Score: animated circular gauge
- Skill Profile Radar: six dimensions, before and after
- Personalized Learning Path: four weighted domains
- Mentor Connection: book 1-on-1 sessions, view feedback
- Cohort Community: activity feed, Q&A, peer collaboration

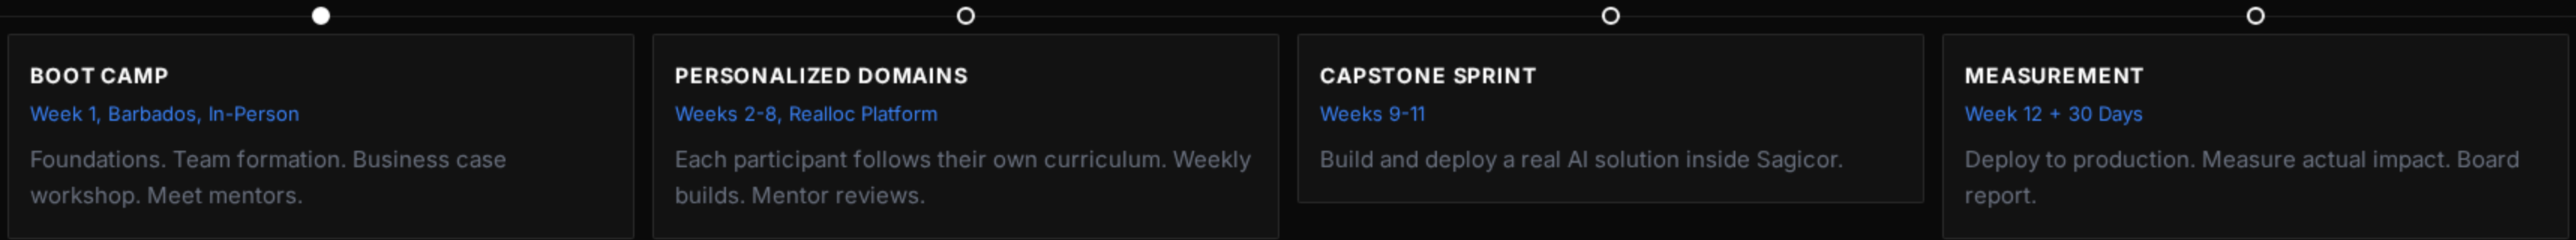

Every Worker. Fully Diagnosed.

When a board member asks "show me one specific person," this is the page you open.

12 Weeks. Personalized.
Mentored. Measured.

The 12-Week Journey

No Two Programs Are the Same

Participant A: Technical Lead	
AI-Augmented Architecture Design	35%
Production AI Deployment	25%
AI Workflow Automation	25%
Capstone	15%

Participant B: Data Architect	
Data Architecture for AI Systems	35%
AI-Augmented Data Engineering	25%
Data Governance for AI	25%
Capstone	15%

Same cohort. Same boot camp. Same mentors. Fundamentally different programs. Because the assessment identified different gaps.

How Each Week Works

Monday

New module unlocks. Practitioner briefing.
Resources. Scenario.

Tue-Thu

Participant builds. Cohort Q&A. Peer and mentor
responses.

Friday

Submission through platform.

Next Week

Mentor reviews with written feedback. 1-on-1
sessions available.

"This module addresses your identified growth area: AI integration for modernization workflows. Your assessment showed strength in architecture with a gap in prompt engineering."

The participant always knows WHY they are learning what they are learning.

Every Capstone Targets Real Business Value

Before building, each participant submits a structured business case:

BUSINESS CASE FORM

Problem being solved

Current state: hours, cost, error rate

Proposed AI solution

Outcome category: Revenue / Cost /
Quality / Speed

Projected measurable impact

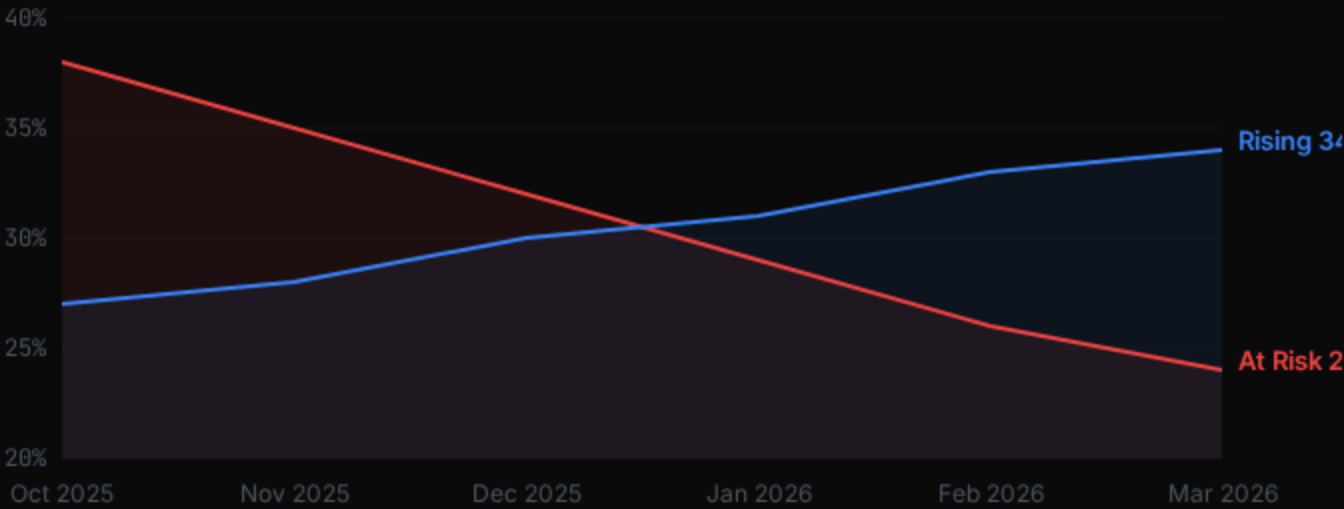

The Realloc platform suggests capstone topics from the participant's task decomposition. The data scopes the opportunity.

Measured by Business Impact. Not Completion Rates.

Revenue Acceleration Serve more customers. Launch faster. Unlock new capabilities.	Cost Reduction Eliminate manual processes. Reduce dependency. Lower overhead.	Quality and Risk Reduce errors. Strengthen compliance. Improve decisions.	Speed and Capacity Same team, more volume. Compress cycles. Automate routine.
---	--	--	--

Each project quantifies projected impact before deployment and measures actual impact 30 days after.

The Trend Line That Matters

As the assessment and training program progresses, at-risk declines and rising increases. The widening gap is Sagicor's AI transformation in motion.

What Sagicor Reports to the Board

- ✓ Assessed 498 technology employees across six countries
- ✓ Identified displacement direction: ~32% rising, ~41% stable, ~27% at risk
- ✓ Selected builder core using data-driven criteria
- ✓ Deployed first AI training cohort in Q2 2026
- ✓ Each participant completed a personalized 12-week program
- ✓ Deployed AI solutions with measured business impact
- ✓ Projected annual savings of \$1.8M+ from retraining vs. replacement
- ✓ 95%+ of participants with actionable development plans
- ✓ On track for 4 cohorts in 2026
- ✓ Building toward self-sufficient AI Skills Development Center

One-click board report from the Realloc platform. PDF. Ready for the CEO.

The Path to Self-Sufficiency

Cohort 1-2 (Q2-Q3 2026)

Cohort 3-4 (Q4 2026 - Q1 2027)

2027 Onward

12 months from vendor-dependent to self-sufficient.

The Bigger Vision

One platform. Multiple partners. All driven by Sagicor's assessment data.

Timeline

○ Week of March 17	Proposal delivery and builder core list
○ Week of March 24	Platform demo for Neil
○ End of March	Cohort 1 selection finalized
○ April	Southern Caribbean assessments and Technical Assessments launch
○ First week of April	Boot camp logistics confirmed (Barbados)
● Mid-April	BOOT CAMP KICKOFF
○ April-June	Personalized domain work
○ June	Capstone deployments
○ July	30-day impact measurement + Board outcome report
○ July	Cohort 2 planning and launch

Next Steps

- 1 Neil reviews and approves builder core list (top 20)
- 2 Align on Cohort 1 final participant selection
- 3 Platform demo: enterprise dashboard, workforce heatmap, participant experience
- 4 Confirm Barbados boot camp location and logistics
- 5 Realloc assigns expert mentors matched to participant profiles
- 6 Southern Caribbean and Technical Assessment phases continue
- 7 Neil announces the program at the STEC meeting
- 8 Boot camp kickoff in April

Sagicor has the data.

Realloc has the platform.

269 practitioners are ready.

The builder core has been identified.

The only remaining question is when to start.

We recommend April.
